Claims 4 and 5 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Elfers.

Elfers discloses, in example 5, a polyurethane comprising a polypropylene glycol having a molecular weight of 547 and a bifunctional isocyanate made at an NCO/OH ratio of 1.04/1. The shape-memory property would be inherent because the polyurethane is the same as the claimed polyurethane.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elfers in view of Nino.

Elfers discloses the invention of the claims but differs from these claims by not using the polyurethane for impregnating fibers.

Nino teaches, in example 2, impregnating fibers with a diisocyanate/polypropylene glycol polymer to make a fiber reinforced plastic laminate.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the polymer of Elfers in the application of Nino because Elfers shows his copolymer as tough and high in tensile strength, which would enhance the properties of Nino's laminate.
